

EXPCALIBUR SCORING GUIDE

In this challenge, you will see two sets of scores:

- The **EXPCalibur leaderboard** shows raw EXP. This score ranks players within the EXPCalibur challenge only.
- The **TISC CTF Platform** shows up to **5,000 points** for EXPCalibur. These points contribute to your total TISC score.

For each scoreboard update:

1. Divide your best EXP by the current top EXP.
2. Round the result half up to four decimal places.
3. The minimum possible multiplier for a positive EXP score is **0.0001**.
4. Multiply the multiplier by 5,000 to get your points.

Zero EXP gives zero points. Until someone scores, every player remains at zero.

SCENARIO 1: PLAYER A LEADS WITH 800 EXP

PLAYER	EXPCALIBUR EXP	MULTIPLIER	TISC POINTS
Player A	800	1.0000	5,000
You	600	0.7500	3,750
Player B	400	0.5000	2,500
Player C	200	0.2500	1,250

Your row uses $600 / 800 = 0.7500$, followed by $5,000 \times 0.7500 = 3,750$ points.

SCENARIO 2: PLAYER D TAKES THE LEAD WITH 1,000 EXP

PLAYER	EXPCALIBUR EXP	MULTIPLIER	TISC POINTS
Player D	1,000	1.0000	5,000
Player A	800	0.8000	4,000
You	600	0.6000	3,000
Player B	400	0.4000	2,000
Player C	200	0.2000	1,000

Your EXPCalibur leaderboard score remains **600 EXP**. Your points change because the top score is now **1,000 EXP**: $5,000 \times 0.6000 = 3,000$ points.

RULES TO REMEMBER

- Only your **best verified EXP** counts; submissions are not combined.
- Every player tied for the lead receives the full **5,000 points**.
- If another player raises the top EXP, your points may decrease even when your own EXP does not change.
- A newly graded score appears on the TISC CTF Platform after the next scoreboard update.
- Rounding can give different EXP scores the same number of points.
